## Full Stack Web Developer

I am an aspiring junior full stack web developer with a foundation in the MERN (MongoDB, Express.js, React, Node.js) stack, eagerly seeking my first opportunities in the professional realm. I am passionate about crafting user-friendly and engaging web applications that align with the needs and expectations of clients and users. I am dedicated to continuous learning and growth in the ever-evolving field of web development.

## Skills

- For web application development, Next.js is my preferred framework, but I also have experience with Vite, offering a diversified skill set in frontend development.
- While JavaScript is my primary language, I have explored TypeScript for projects requiring a more robust typing system.
- I have a strong background in using Tailwind CSS to create modern and agile interfaces, providing a sleek and responsive design for web applications. Additionally, I have experience with Bootstrap, offering versatility in design and development.
- My skill set extends to animation and 3D graphics using Three.js and Framer Motion, bringing dynamism and creativity to my projects.
- In the backend realm, my focus has been on MongoDB as the primary database, with additional experience in MySQL for flexible data management and database systems.
- Understanding and application of RESTful design principles to integrate APIs into web applications, facilitating data fetching and manipulation.

## Education

### MySQL Course

2024 - 2024 | Mastermind

### #YoProgramo

2022 - 2023 | Argentina Programa

- Full Stack Web Course

### React.js Course

2022 - 2022 | CoderHouse
